Company Basics

Who We Are

Guardian Communication Systems is a proudly Australian owned and operated company. Our diverse team is dedicated to the development and production of specialised Nurse Call, Intercom and Public Address IP based solutions for life critical systems and secure facilities.

Our Vision

To accelerate a safer and secure future with a world-class communication system.

Our Mission

To work as a team in conjunction with clients, consultants, contractors and the community to deliver innovative and customised technologies that improve safety and security for all.

Our Values

We value *Integrity*, *Innovation* and *Collaboration*

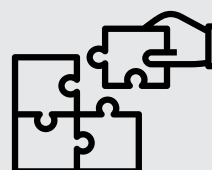

Integrity

We are focused on honesty and accountability to ensure we deliver the highest customer service and product reliability.

Innovation

We aim to be a global leader in the industry through making positive changes and by our commitment to continuous innovation towards future-proof technologies.

Collaboration

We strive to be a cohesive team and pride ourselves in our ability to work in collaboration with clients, consultants, contractors and the community to deliver exceptional results.

Description of Services

We offer a flexible and customisable system to meet the required specifications of each individual facility as we recognise the unique purpose and challenges across different industries. We provide comprehensive support and maintenance services for the life of the facility to offer the best long-term solution for client.

We provide a wide range of professional engineering services related to design, development, manufacturing, commissioning, customisation, training and maintenance to offer the best long-term solution for client.

Our global reseller support network operates locally with users and are an extension of the team with their own range of services and options for support.

History, Expansion and Growth

1988

CellGuard was founded in 1988 and over the past 30+ years we have built a trusted name and reputation, with our systems being featured in over 300+ Prisons and Police stations.

2016

In 2016 the CellGuard IP was purchased by the private company Prison Communication Systems. General Manager John Grey commenced with the company and maintained the staff base with numerous employees completing 20+ years of service. John saw the importance to advance the products and revitalise the research and development department.

2024

In 2024 the company rebranded to Guardian Communication Systems and released the CareGuard Nurse Call System for market diversification.

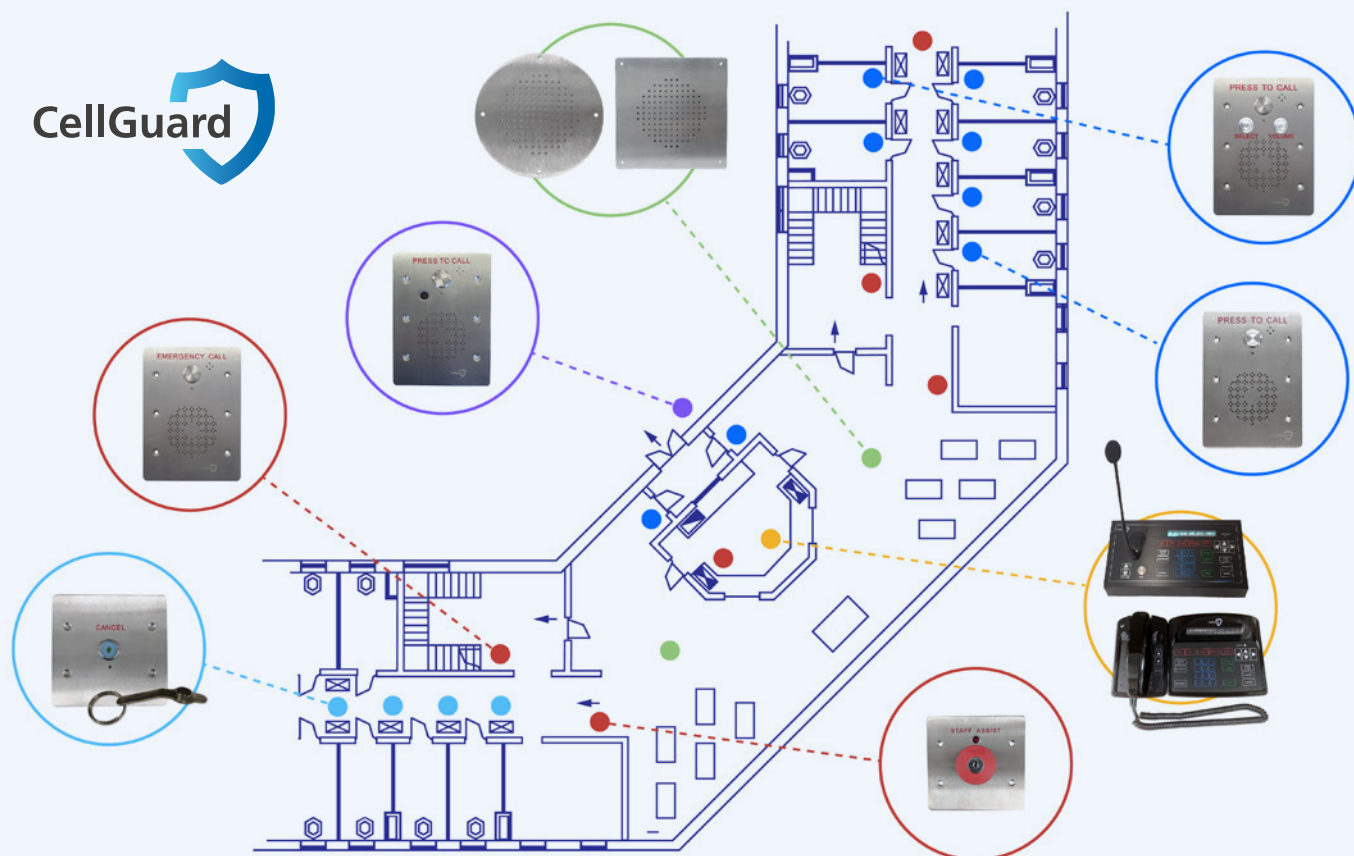

Now

We are a proudly Australian owned and operated company and accomplish all manufacturing and development locally in our Osborne Park Head Office in Western Australia. We are honoured to have a diverse and highly skilled team that is inspired to support the healthcare and security industries for local and international markets.

Certifications

Guardian Communication Systems is proudly Australian owned and operated, along with all design and manufacturing occurring locally in Perth, Western Australia. Products are developed to the highest international standards.

CellGuard in a Typical Accommodation Block

- Help and Emergency Points
- Public Address / Music Speakers
- iVerify with ID tagging system
- Door and Cell Intercoms
- Video Intercoms
- Officer Stations

Product Description

CellGuard Intercoms, Call-points and Public Address (PA) are suitable for a variety of communication solutions with a range of customisable options. Our flexible software and configuration settings allow for individual and system functions and features to meet any range of specification requirements. Our unique distributed system architecture provides native redundancy and the high availability required to support secure and life-critical IP networks and systems.

We offer a range of durable products specifically designed for facility management and the electronic security of physically and acoustically harsh environments with minimalist maintenance requirements. Our solutions have been designed to ensure a high level of integrity for user safety, accountability, supervision and management.

The Intercom Stations are built to last and packed with customised security features and PA functionality. Our applications are flexible and suitable for Room, Cell, Medical, Music, Door, Video, Gate, Bollard, Help and Emergency points. CellGuard also has a real-time ID tagging system amalgamated to the intercom for superior utility.

Our solutions interface with electronic security technologies like CCTV, Access Control and Security Management Systems to provide the end user with a reliable, flexible and seamless Communication System.

Through continuous innovation of our technology over three decades, we offer lifetime system backwards compatibility to protect your investment. This ensures that your facility has our ongoing support and is future proofed for expansions and upgrades.

Our growing portfolio of CareGuard products ensure security, safety and care in the medical industry.

Product Description

CareGuard Nurse Call Systems are designed and manufactured in Australia, ensuring the highest standards of design, quality and workmanship. Featuring a diverse range of products, our systems are easy to use and maintain, providing seamless communication between patients/residents and caregivers.

In emergencies, quick access to assistance is crucial. Our emergency call points allow patients and residents to alert caregivers immediately, facilitating rapid response and ensuring optimal outcomes. With clear audio/visual signalling, our emergency call points are essential for maintaining safety in healthcare environments.

Our nurse call points enable patients and residents to request assistance from caregivers with the push of a button. Designed for simplicity and reliability, our nurse call points ensure that help is always within reach, enhancing the overall quality of care provided in health and aged care facilities.

For non-emergency situations that require additional staff assistance, our Staff Assist points

provide a convenient call priority for staff to request and communicate with each other. With clear indicators and intuitive operation, our staff assist points streamline communication and promote efficient workflow.

Our LED and LCD display annunciators are essential for the audio/visual display of active alarms throughout the Nurse Call system for critical staff communication and enhanced patient care.

A multifaceted software that is crucial for effective healthcare facility management by optimizing the performance of nurse call systems, improving patient outcomes, and enhancing the overall efficiency of healthcare facilities.

We understand that every healthcare facility is unique. That's why CareGuard is fully customizable to suit your specific requirements, whether you're a small clinic or a large hospital.

Our team of experts is here to support you every step of the way, from initial installation to ongoing maintenance and technical support.

Mid North Coast Correctional Centre Expansion Project

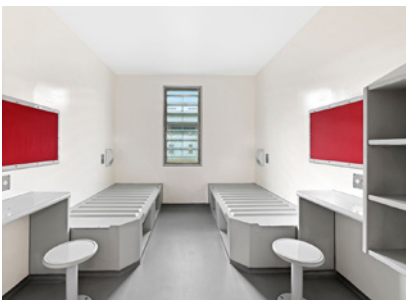

Image credit: BESIX Watpac, besixwatpac.com.au

Mid North Coast Correctional Centre is in New south Wales, located 455kms north of Sydney.

The new expansion upgrade has seen four new accommodation blocks, each with 110 beds and an exercise yard, were delivered along with an industry building, programs building, health clinic, segregation building, custodial offices, network of secure walkways, outdoor recreational areas and a new secure perimeter with integrated security system. Refurbishments works to the gatehouse, visits building, staff amenities intake reception and the existing security services were undertaken.

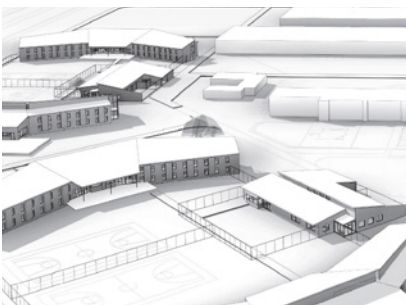

Work included a breakthrough of the existing secure perimeter to link the new and existing centres and was delivered in a live environment with no impact to the centre's security and operations.

The expansion provides the centre with a safer and more secure environment for inmates and the new industries complex and program spaces are dedicated to inmate rehabilitation.

CellGuard provided the latest secure intercom technology to the new expansion. These products were seamlessly integrated with the existing communication system utilising the high level of backward compatibility of CellGuard's future proof design. Therefore, eliminating need for a full site upgrade, minimising the overall impact to the facility day to day procedures and being a cost-effective solution.

Casuarina Prison Expansion Project

Casuarina Prison is a maximum-security facility for male prisoners, located 35 kilometres south of Perth, Western Australia. Originally intended primarily for sentenced prisoners, it now also holds a large number of remand prisoners.

The 344 bed expansion, along with the recent addition of 512 new beds including a new alcohol and other drug treatment prison for men, will make Casuarina the State's biggest and most complex prison by the end of 2023.

To support the additional accommodation, upgrades have been undertaken to the utility services on site, as well as construction of new ancillary support buildings containing program and education rooms, interview and medical consultation rooms and a video link facility. The expansion additionally includes a super max unit, upgrades and expansions to the existing medical centre, visitor area, reception area and car park.

CellGuard provided the latest secure intercom technology to the new expansion. These products were seamlessly integrated with the existing communication system utilising the high level of backward compatibility of CellGuard's future proof design. Therefore, eliminating need for a full site upgrade, minimising the overall impact to the facility day to day procedures and being a cost-effective solution.
